## Summer Training

### CVFrameiq — Since Nov 2025

*Computer vision Intern*

- • Contributing to backend services supporting computer vision pipelines
- •Assisting in integrating object detection and tracking models into production workflows
- •Collaborating with the engineering team to debug, test, and optimize system components
- •Gaining hands-on experience with scalable system design and deployment considerations
- **Tech Stack**: Python, FastAPI, REST APIs, OpenCV, Computer Vision, Git, Linux

### Moonpreneur — July 2025 - Sep 2025

*Project guide Robotics*

- •Mentored students in designing and developing real-world software and AI projects
- •Guided project planning, debugging, and code review sessions to strengthen hands-on learning
- •Assisted in implementing Python and web-based solutions, fostering collaborative problem-solving
- •Enhanced communication and leadership by managing multiple project teams simultaneously
- **Tech Stack:** Python, Arduino, Raspberry Pi, Microcontrollers, IoT Sensors, Block coding, Robotics Kits

## Projects

**Reverse Image Search Engine**| *Python, Feature Extraction, Similarity Search* — **Jan 2026**

- Engineered a reverse image search system using visual embeddings, achieving **87% Top-5 retrieval accuracy**
- Implemented similarity-based matching across **10,000+ images** using cosine similarity
- Constructed an optimized feature extraction pipeline, reducing query latency by **35%**
- GitHub Repository Link : Reverse_search_engine

**Bearing Fault Detection (Reinforcement Learning)** | *Python, Reinforcement Learning, Signal Processing* — **Nov 2025**

- Designed an RL-based fault detection framework achieving **92% classification accuracy**
- Analyzed vibration signals across **multiple fault conditions and load scenarios**
- Validated robustness with cross-scenario testing, reducing false detections by **15%**
- GitHub Repository Link: bearing_fault_detection

**Hand-Digit Classifier** | *Flask, OpenCV, Deep Learning* — **Mar 2025**

- Integrated **OpenCV-based preprocessing pipeline** to enhance input quality and edge detection
- Trained a custom CNN model achieving **97.8% accuracy** on the MNIST dataset
- Reduced end-to-end response time to support **instant classification under 200ms latency**
- GitHub Repository Link: **hand_digit_classifier**

## Certificates

**Cloud Computing** — **May 2025**
*NPTEL — certificate*

**Introduction to Large Language Models** — **Feb 2024**
*Coursera — certificate*

**Explore Career in Machine Learning** — **Feb 2023**
*LinkedIn Learning — certificate*

## Technical Skills

**Programming:** C++, Java, Python, C#, Fast API, Flask, Docker, Git
**AI Model Training:** LoRA Fine-Tuning, Checkpoint Training, Model Optimization
**Data Processing:** OpenCV, NumPy, Pandas, Data Augmentation, Dataset Curation
**Cloud & Deployment:** AWS, GCP, Render, GPU Optimization, CUDA
**Technologies/Frameworks:** Git, My SQL, Linux, Jupyter Notebooks
**Backend & API Development:** Fast API, Flask, REST API Integration, Docker,SpringBoot

## Education

**Lovely Professional University Punjab** — **2022 – 2026**
*Computer Science and Engineering — CGPA: 7.08* — *Phagwara, Punjab*

**Scholar's Senior Secondary School** — **2021 – 2022**
*12th with Science — Percentage: 66 %* — *Deoria, Uttar Pradesh*

**Scholar's Senior Secondary School** — **2019 – 2020**
*10th with science — percentage: 88.7%* — *Deoria, Uttar Pradesh*
